# Gourds — THE WALKERS — Dahlias

## OUR HOBBY

For several years, as hobbyists, we have grown all types and species of gourds, we can locate, and offer the following seeds from this year's crop. All seeds are hand-selected we package for sale, and are true to listings, in as far as is within our control. Bees cross pollinate, and often change the colorings, shapes, and sometimes the types, especially the ornamental gourds.

## ORNAMENTAL GOURD SEEDS

Our special mixture of many types and colors .....	pkt.	.35
Our general mixture of larger types and colors .....	"	.25

These 4 sets, named.....	7.00

### GLADIOLUS

12 Giant bulbs, long spikes, large florets, named .....	1.00
Write for prices on larger quantities.	

### CULTURAL DIRECTIONS

Gourds and Dahlias both require a sunny location. Dahlias need a medium to heavy soil, while Gourds do well on sandy, well drained soil. Plant either after danger of frosts. Gourds grow nicely on walls, buildings or trellis, also on the ground. Commercial fertilizers are more convenient to use as top applications. Gourds require dusting often to control the insects, such as the cucumber beetle. Thorough working of the soil is beneficial. Harvest dahlia after frost, store in a cool cellar in tight containers. Pick the gourds when stems show a brown condition, wash them in weak insecticide solution, dry and store in a cool shed for several weeks. Wax and polish with a good paste wax. Shellac or varnish is not recommended. All gourd seeds are in generous packets. All dahlia tubers are field-grown only, and mailed as priced in first to fourth zones. To other zones, add 50 cents for postage, per doz. tubers.

Any further information cheerfully given.
